

Pfizer-Biontech COVID-19 Vaccine, BIVALENT

Original and Omicron BA.4/BA.5

This vaccine is an intramuscular injection for individuals 12 years of age and older as a single booster dose administered at least 2 months after completion of primary vaccination with any authorized or approved COVID-19 vaccine or receipt of the most recent booster dose with any authorized or approved monovalent COVID-19 vaccine.

- Pharmacy will maintain frozen vials and release to immunization areas as needed.
- Allow vial to thaw (do not refreeze thawed vials)
 - In refrigerator (2°C - 8°C), carton of multi dose vials can take up to 6 hours to thaw
 - Room temperature (up to 25°C) for 30 minutes
- Once thawed the un-punctured vial of vaccine can be stored:
 - Refrigerated (2°C –8°C) up to 10 weeks
 - Room Temperature (up to 25°C) for total of 12 hours
- Discard multiple dose vial 12 hours after first puncture

To prepare this medication: DO NOT DILUTE

- Gently invert the vaccine vial 10 times (do not shake).
- Prior to mixing, vaccine may be white or off white opaque amorphous particles.
- After mixing, vaccine should appear as a white to off-white suspension with no visible particles. Do not use if discolored or if particles present.
- MULTI DOSE VIAL:
 - Multi dose vial contains 6 doses of 0.3 ml.
 - Withdraw 0.3ml dose, administer immediately.
 - Mark multi dose vial with date and time of puncture, store between 2°C-25°C and discard 12 hours after first puncture.
- Use immediately or can store in refrigerator to be administered within 12 hours.
