**Name of Potential Opportunity:** Supplementing Survey Data with Wearables Data

**Name and titles of potential supervisor/s (and link to external-facing RTI expert page, if available):**
**Name:** Stephanie Eckman, PhD  
**Title:** Fellow  [http://www.stepheckman.com](http://www.stepheckman.com)

**Overview: (2-4 sentences)**
In the most recent round of the National Longitudinal Study of Adolescent to Adult Health (AddHealth) survey, respondents were asked if they owned a fitness tracking device and whether they would be willing to donate that data to the study. This student will investigate which respondents owned the devices, which were willing to donate and the objections mentioned by those who chose not to donate. The research findings here will improve other surveys that want to take advantage of fitness data already collected by respondents.

**Preferred skills: (including foreign languages, programming languages, etc.)**
- Statistical programming in R, Stata or Python
- Quantitative analysis experience
- Experience writing literature reviews
- Good written English

**Number of Interns:** 1
